

# ENVIRONMENTAL COMMITMENT

BKSK's 30-plus-year commitment to responsible design extends beyond industry rating systems. It is our belief that beautiful buildings are also highly efficient. Sustainable design, like good design, mandates productive partnerships and open, candid conversations. Throughout the design process, we track the project relative to LEED standards to enable seamless integration, regardless of whether certification is desired. Our minimum office baseline for typical projects, with or without certification, is LEED Gold.
